MedLearn AI

AI-Driven Clinical Assessment Platform For Healthcare Workforce

The Pain points

- Content Creation : In-House or 3rd party
- Generic Content
- Competitive Pressure
- Manual competency Mapping
- Content Update Lag
- No Evidence Based Citation Integration
- Less Integrations With Cloud Storage
- Speed and Scalability

Problem Overview

- As hospitals expand or acquire new facilities, they need to rapidly scale training content for new staff, new departments, and new specialties.
- Manual content creation doesn't scale efficiently (USERS REVIEWS FROM INTERNET)
- HLX delivers exceptional personalized pathways (Jane AI – 98.61correlation with human validation) but the content creation is still manual.
- When clinical guidelines change , updating all affected training modules is slow
- Educators must search for relevant studies, verify currency, extract key findings, and format citations
- competitors like Sana Learn and Docebo now have AI content generation
- Hospitals don't want generic training—they want training on THEIR protocol, THEIR medication formulary,THEIR Epic workflow within Less time

The Solution

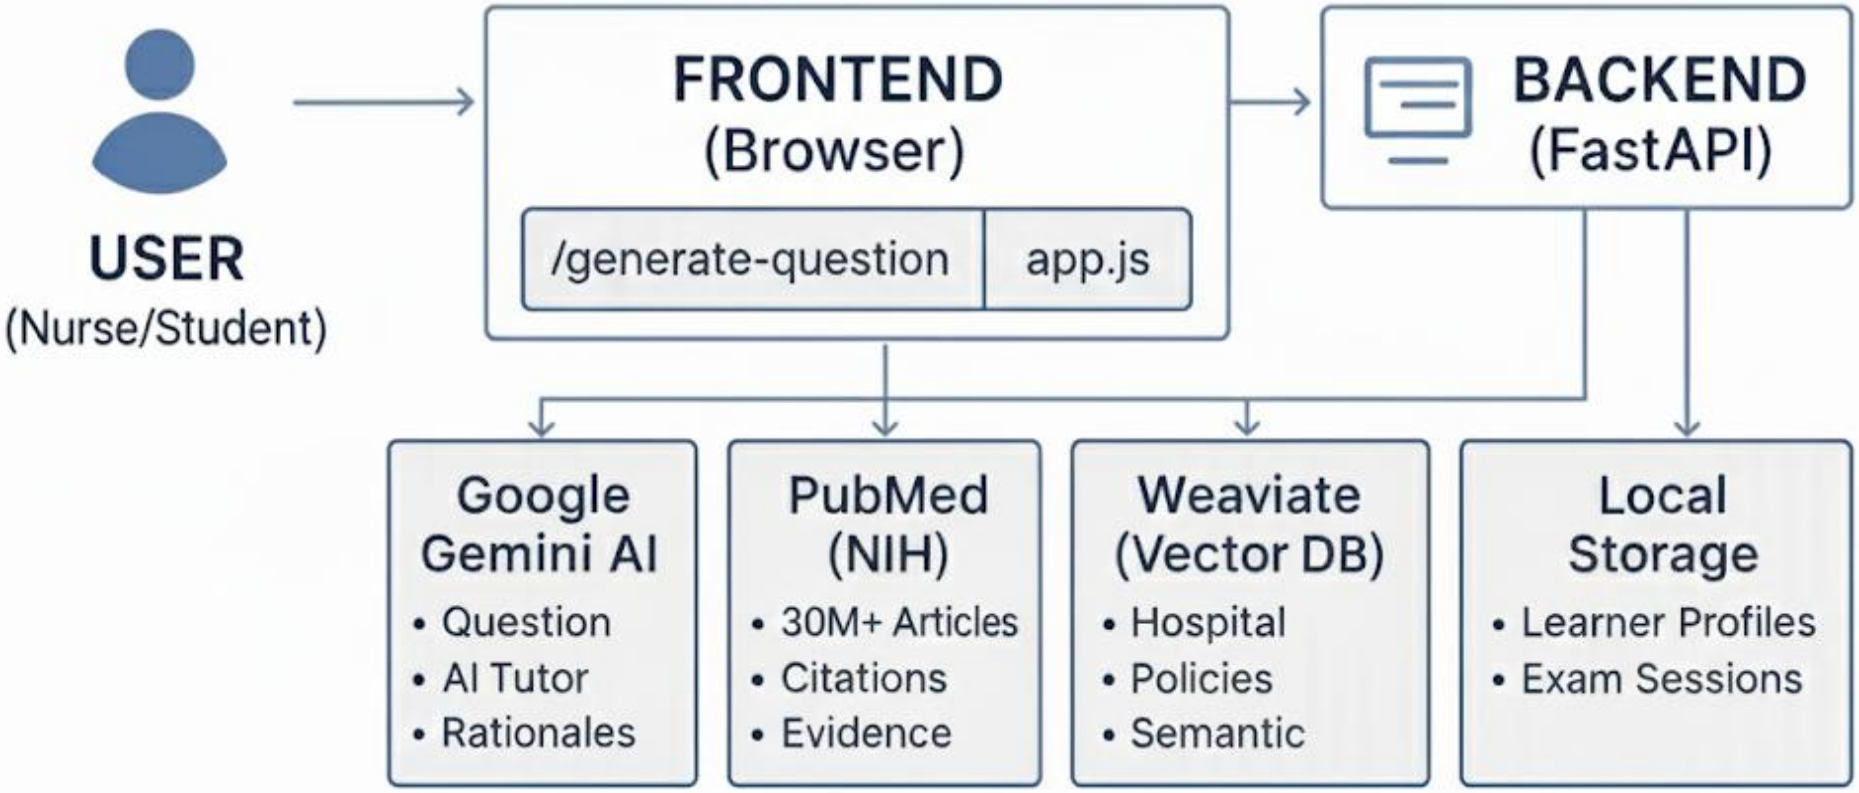
- Content Velocity and Cost
- Evidence Based Quality
- Document Upload & RAG
- Personalization via Difficulty levels
- Comprehensive coverage on topics
- Micro-Modules
- Skills/ competency graphs
- More Advanced Adaptivity
- Smarter Autoring Helpers

MedLearn AI Features

- AI Content Generation(Scenario Based)
- PubMed Based Evidence
- Supports All type of Files
- Hospital policy RAG
- Skills Analytics
- Micro-Modules
- Adaptive Learning
- Language Translation
- NCLEX- NGN style based questions

MEDLEARN AI

LEARNING MODERNIZED



MedLearn Expanded

- Semantic search across indexed hospital documents using Weaviate database enables context-aware question generation from specific protocol sections
- Combines uploaded hospital protocols with PubMed evidence to generate questions
- Three assessment modes (Practice, Timed, Adaptive) with real-time difficulty adjustment based on learner performance pattern
- Tracks performance at skill level and topic level, not just completion rates
- Educators switch tone (“student nurse”, “experienced RN”) and reading level (plain vs technical) for scenarios and explanations.
- Chat interface Uses your indexed documents + PubMed to Answer learners questions - AI chatbot
- Breaks complex topics into 5-10 minute modules consumable during clinical breaks, respecting healthcare workers' limited dedicated study time

Future Scope &Improvements

- Knowledge Retention Proxy
- Gap Driven Recommendations
- Gamification Layer
- No-Go Topic lists
- Social and Peer Learning
- Natural Language Processing
- Multi-Lingual Semantic Support
- Fully Featured Mobile Experience
- Even More use of AI (AGENTIC AI & RAG)

Ethics & Research

This analysis was conducted independently using only publicly available sources including official company websites, Health stream webinars, published Research , Blogs and industry analysis reports. No confidential or proprietary information was accessed. All materials analyzed are publicly accessible and properly cited, with supporting documentation and screenshots included in the research appendix.
